

Kodak

Prostar Archive Processor

Safeguard your future with archive processing today.

Committing your source document images and computer-output digital documents to microfilm assures access to important information for decades—even centuries. Proper processing is critical to protecting that access. Make certain you achieve true archival keeping with a new *Kodak Prostar* Archive Processor, now easier to use and more ecologically friendly than ever before. It is designed for room-light operation and is quiet and compact.

**START WITH AUTOMATIC THREADING.
FINISH WITH ARCHIVAL QUALITY.**

With the Archive Processor, you don't need a film specialist to get predictable, high-quality results. It incorporates the latest in digital monitors and controls, rapid-recovery, energy-saving stand-by cycles, and an environment-friendly anti-siphon water supply. The Archive

Processor provides precisely controlled film processing with minimal operator training or experience. Simply attach film to the self-threader and insert it into the drive rollers. In less than a minute, dry, processed film begins exiting the machine. Upon completion of a roll, the Archive Processor automatically cycles into a money-saving energy-conservation mode.

TABLETOP PROCESSING THAT FITS WHERE YOU WANT IT.

Its room-light loading and tabletop size permit you to use the Archive Processor virtually anywhere. Plus, there's no mixing, no mess, and no fuss, because *Kodak Prostar* Plus Chemicals come premixed in disposable plastic containers and are ready to use. You gain the added security and control of in-house processing without the expense of a darkroom. For added convenience, parts that require periodic replacement, such as air filters, can be replaced in seconds by an operator.
